

TABLES

OAK AND WALNUT

GENERAL DESCRIPTION	
Merchandise category	Tables
Timber species	Black Walnut (<i>Juglans nigra</i> L.) or European Oak (<i>Quercus robur</i> - <i>Quercus petraea</i>)
Production site	Cažma, Croatia
Colour	Natural oak and american walnut colour

DESCRIPTION:

The product is composed by a plane of two tables arranged parallel to each other and 4 classic legs or two trapezoidal legs placed at the ends of the tables, with different possible solutions (see figure). The legs are joined to an underlying extensible support system, which makes it more stable. Thanks to its exclusive design and the uniqueness of each piece, it is suitable for both domestic and non-domestic use and it is much appreciated in large and bright spaces, such as meeting rooms, hotel halls, etc. Presence of cracks, filling and sapwood is not to be considered a defect but is part of the characteristics that enhance the uniqueness and naturalness of each piece, which is why there are no quality classes, but only "Nature" details. The variations in the wood grain are visible and give the environment a natural warmth and charm.

The following sales options are available:

- Raw surface (2 boards) untreated, with legs
- Treated surface (2 boards), with legs

MATERIAL:

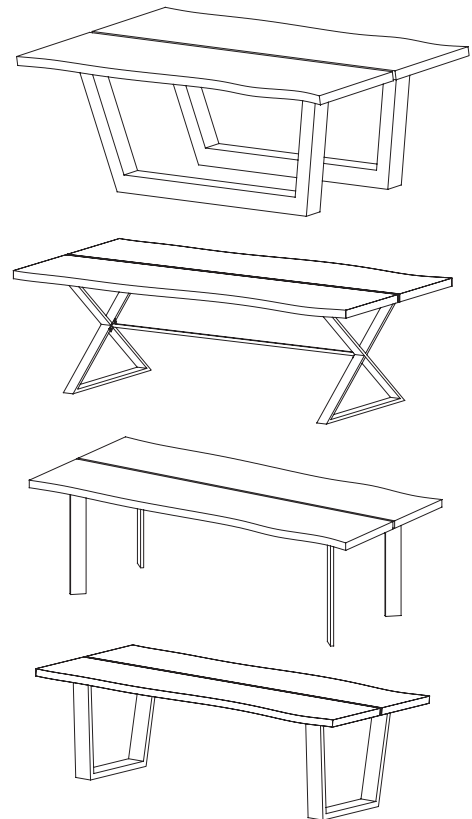

The tables are available with oak or American walnut wood, raw or treated, while the legs can be ordered in stainless steel or iron (painted in white or black), with different shapes. The assembly methods, screws to be used and further mounting parts are indicated below in the instructions for assembly.

The treatment is carried out with:

- "Hartwachs Coloroil" (Borma Wachs) based on natural oils reinforced with quality resins. Additional information can be found here: http://www.bormawachs.com/dettaglio_new.php?idprod=4992&cat1=4
- "Mathys Timberex Natur", based also on natural oils and resins. Additional information can be found here: <http://www.timberex.com/catalogue/light-medium-traffic/timberex-natural>

DIMENSION:

- Length: from 1500 mm to 4500 mm
- Width: from 100 mm to 110 mm
- Thickness: from 40 mm to 50 mm

DURABILITY:

CHARACTERISTICS	EUROPEN OAK	AMERICAN WALNUT
Biological durability	Classes: 2-4 Fungi, D Anobium, M Termite	Classes: 3 Fungi, n/d Anobium, n/d Termite
Impregnation	Classes: 4 Hardwood, 1 Sapwood	Classes: 3-4 Hardwood, 1 Sapwood

Reference regulations: UNI EN 350 Durability of wood and wood-based products

USE:

The table is designed and has been tested for domestic use. Nevertheless, at the discretion and responsibility of the customer it can also be designated for non-domestic use. With non-domestic use we mean: hotel halls, public rooms, coffee rooms, meeting rooms and entrance halls for offices, libraries, places of worship, boutiques, etc. We also recommend not to use the table outdoors. Although it is very robust, it is recommended to avoid placing heavy loads on the table and not to get on it.

ASSEMBLY:

It is advisable to have the assembly carried out by qualified personnel, experienced in the assembly of furniture.

MAINTENANCE AND USE INSTRUCTION:

Inevitably, over time you could form signs due to the use of the product, such as dents, marks or incisions of objects, streaks.

We recommend the use of protective pads on the leg part in contact with the floor. For optimum quality, retighten the screws when necessary. Wipe with a suitable moistened cloth, if necessary, with a mild, non-foamy neutral detergent, and then wipe dry with a cloth. Do not use abrasive products. Contact of product surfaces with hot bodies could damage the material. Since the wood is finished with natural resins, we advise not to leave damp cloths on the table. The stainless-steel surfaces can be cleaned using only a soft cloth and warm water, with or without stainless steel detergents (it is extremely forbidden to use steel brushes or steel wool, because they contain particles which, in contact with the stainless steel, can cause damages of the material). For cleaning the parts of varnished iron, please use hot water or products with a neutral pH (pH 7) diluted in hot water. Use non-abrasive soft cloths (of cotton) and avoid rubbing the surfaces intensely. It is advisable to keep the environment with a relative humidity of 45% up to 60%, the temperature not lower than 10° and between 18°C and 22°C. To avoid cracks and splits, keep humidity and temperature checked. The product must be placed at least 1 m away from heating sources or any external effect such as rain, snow, UV rays, temperatures above 40 degrees.

DISPOSAL:

The discharged product must not be dispersed in the environment but must be disposed of in accordance with the procedures and in compliance with the regulations in force in the specific context.

CERTIFICATION:

It is possible to ask for FSC® certified boards.

TESTS:

Strength, durability and safety tests, carried out by Catas S.p.a., comply with the norm UNI EN 12521-2016 "Furniture: strength, durability and safety; requirements for domestic tables".

The manufacturer declines all responsibility deriving from an improper use of the object described above.
